

Put Us To The Test

AFL was certainly “put to the test” February 2015 when a devastating fire destroyed our facility. While the fire destroyed the facility, it did not destroy the attitude and commitment to being the best independent, 3rd party laboratory in the industry. Illustrated by the fact that just 4 short months post-fire, AFL opened its doors to a 14,000 square-foot transitional facility in July.

In fact, our Product Quality and Nutrition departments never missed a step, operating fully the day after the fire. Currently our Micro department is up and running along with USP. Chemistry also has capabilities to provide our most common tests such as environmental allergens, moisture, fats and aflatoxins. In many cases new, state-of-the-industry instrumentation allows for better and streamlined testing.

Every day and every week we are adding new tests to our list of capabilities.

AFL differentiates itself from competitors with unique services as outlined below:

- No charge for supplies
- Free courier service for sample pick-up
- Samples processed 7 days a week, including Holidays
- Fast, reliable turnaround
- AFL Management available 24/7
- Regular on-site visits from your Account Manager, or as requested
- Electronic invoicing for easy review, file keeping and processing

While we are in transition which includes rebuilding a new laboratory, we intend to maintain all of our required certifications and accreditations.

Selected Accreditations:

USDA FSIS

- Certificate Number - 4884

Food and Drug Administration (FDA)

- FDA Registered
- Certificate Number - 3005057567

National Women's Business Enterprise (WBENC)

- Certified
